LIFE Project Intervention Areas

IMPULSO VERDE BUILDING

Low energy consumption building with timber structure made of Galician species. It will house a municipal service, small businesses or NGOs related to sustainability, a reading and work space and a classroom for environmental training.

INFORMATION POINT

It provides information about the interventions done within Life Lugo + Biodinámico Project and the most suitable itineraries for visiting the area. It also gives information about the formative activities schedule which will be held at the building.

NATIVE VEGETATION

Low-maintenance native shrub and tree species are chosen as the basis for the generation of little ecosystems.

PERMEABLE PAVING

Rainwater filtering pavements are used, reducing the amount of water discharged into the sewage system and making possible the integration of vegetation.

VEHICLE CHARGING

Several EV charging stations will be set in the vicinity of the building to promote sustainable mobility.

ENERGY CROPS

Miscanthus plantation demonstration area for the production of quality biomass in an

URBAN GARDENS

Meeting place for social interaction where organic farming can be practised

NEW CYCLE PATH

The division of Infanta Elena Avenue will make possible a new cycle path that will allow citizens to reach the park by this means of transport

WATER GARDENS

Little sunken areas that gather rainwater, thus changing the landscape and strengthening the ecosystem
